

Project: Student Social Media Use & Mental Health: An Interactive Tableau Dashboard

Build Dashboard 1 — Overview

Recommended worksheet names

1. KPI - Total Students
2. KPI - Avg Usage
3. KPI - Avg Mental Health Score
4. KPI - Avg Sleep
5. Chart - Academic Level
6. Chart - Usage Distribution
7. Chart - Stress Distribution
8. Chart - Platform Distribution

Chart 1 — Students by academic level

Worksheet: Chart - Academic Level

- Rows: Academic_Level
- Columns: COUNTD(ID)
- Marks: Bar
- Sort: Descending
- Label: Show mark labels

This is your first demographic chart.

Chart 2 — Distribution of social-media use

Worksheet: Chart - Usage Distribution

- Columns: Avg_Daily_Usage_Hours
- Right-click the field → Create → Bins
- Rows: COUNTD(ID)
- Marks: Bar

Use a bin size such as 0.5 hours to start. Adjust if the chart becomes too dense.

Chart 3 — Stress-level distribution

Worksheet: Chart - Stress Distribution

- Rows: Stress_Level
- Columns: COUNTD(ID)
- Marks: Bar
- Sort: Low → Medium → High → Very High

Chart 4 — Platform distribution

Worksheet: Chart - Platform Distribution

- Rows: Most_Used_Platform
- Columns: COUNTD(ID)
- Marks: Bar
- Sort: Descending

Use a horizontal bar chart because platform names are categorical labels.

Build Dashboard 2 — Social Media & Mental Health

This is the most important page.

Worksheet names

1. KPI - Avg Usage
2. KPI - Avg Mental Health Score
3. KPI - Avg Unlocks
4. KPI - Avg Study Hours
5. Scatter - Usage vs Score
6. Box Plot - Score by Usage Category
7. Bar - Score by Stress
8. Heatmap - Academic x Usage

Chart 1 — Scatter plot

Worksheet: Scatter - Usage vs Score

1. Drag Avg_Daily_Usage_Hours → Columns
2. Drag Mental_Health_Score → Rows
3. Drag ID → Detail
4. Change Marks to Circle
5. Add Stress_Level → Color if useful
6. Add a Trend Line

This is the chart I would place largest on the dashboard.

Chart 2 — Box plot

Worksheet: Box Plot - Score by Usage Category (<3 : Low, <6 : Moderate, >=6 : High)

1. Drag Usage Category → Columns
2. Drag Mental_Health_Score → Rows
3. Drag ID → Detail
4. Use Show Me → Box-and-Whisker Plot

This shows the distribution of scores by usage group.

Chart 3 — Average score by stress

Worksheet: Bar - Score by Stress

- Rows: Stress_Level
- Columns: AVG(Mental_Health_Score)
- Marks: Bar
- Color: Stress_Level
- Label: Show values

Chart 4 — Heatmap

Worksheet: Heatmap - Academic x Usage

- Rows: Academic_Level
- Columns: Usage Category
- Marks: Square
- Color: AVG(Mental_Health_Score)

- Label: Show values

This is a very good chart for identifying group differences.

Build Dashboard 3 — Student Segments

Worksheet names

1. Heatmap - Age x Stress
2. Scatter - Sleep vs Score
3. Scatter - Study vs Score
4. Bar - Score by Platform
5. Table - Student Segments

Chart 1 — Age group × stress level

- Rows: Age Group ([18-19], [20-21], [22-24])
- Columns: Stress_Level
- Marks: Square
- Color: AVG(Mental_Health_Score)

Chart 2 — Sleep vs. mental-health score

- Columns: Sleep_Hours_Per_Night
- Rows: Mental_Health_Score
- Detail: ID
- Color: Stress_Level
- Trend line: Optional

Chart 3 — Study hours vs. mental-health score

- Columns: Study_Hours
- Rows: Mental_Health_Score
- Detail: ID
- Color: Academic_Level

Chart 4 — Average score by platform

- Rows: Most_Used_Platform
- Columns: AVG(Mental_Health_Score)
- Marks: Bar
- Sort: Descending

Chart 5 — Highlight table

Create a table with:

- Academic_Level
- Usage Category
- Stress_Level
- AVG(Mental_Health_Score)
- AVG(Sleep_Hours_Per_Night)
- AVG(Study_Hours)
- COUNTD(ID)

This gives users a detailed comparison after they explore the charts.

Add the filters

I would use one filter panel across all three dashboards.

Recommended filters

1. Gender
2. Age Group
3. Academic Level
4. Stress Level
5. Usage Category
6. Most Used Platform
7. Purpose Of Use
8. Country
